

REMARKS

By the present Amendment, Claim 1 is amended to yet more clearly define the present invention, and an abstract of the Disclosure is added.

An early action on Merits is respectfully requested.

Respectfully Submitted,

  
Alexander Zinchuk  
Reg. No. 30,541

Patent Claims:

1. Method for generating a high-resolution large image on the front side of a surface (1), in particular on a building façade. **characterized in that** a large number of light passage opening (3) are each illuminated by preferably one projector (5) so as to generate a partial image, in particular by a video projector in the form of a light source with changeable, high-resolution motifs.
2. Method according to claim 1, **characterized in that** the light passage openings (3) are the windows of the façade (1).
3. Device for generating a high-resolution large image on the front side of a surface (1), in particular on a building façade, with
  - a large number of light passage openings (3) and
  - a large number of projectors (5) for illuminating the light passage openings (3), **characterized in that** the projectors (5) are configured as light sources with changeable, high-resolution motifs.

4. Device according to claim 3, **characterized in that** the projectors (5) are arranged in the area of the rear side located across from the front side of the surface (1) or in the area of the ceiling.
5. Device according to claim 3, **characterized in that** the inside and/or outside of the light passage openings (3) is covered with a coating (7), preferably with an adhesive film or a blind.
6. Device according to claim 3, **characterized by** a control device, by which the light passage openings are provided each with a partial image and are centrally controlled.
